Press the Set/Snooze button twice to display the date within 3 seconds, display will be return to normal time automatically. Press Set/Snooze button three times to display the seconds, press Set/Snooze button once again, display will be return to normal time.

Use of the Snooze function

The SNOOZE function will be implemented automatically when the ALARM mode is set. When the time reaches a preset Alarm time, a 30 second beeping/vibration will be generated. The alarming will be halted for 5minutes by pressing the SET/SNOOZE button, during this period, the "AL" symbol will blink once per second. Then, the beeping/vibration will be halted and will be repeated every time the SET/SNOOZE button is pressed during the alarming, but it will be stopped by press the "MODE"

button during the alarming period. The unit will be back to the standby mode.

If neither MODE nor SET/SNOOZE is actuated, the alarming will last for 30seconds in one time and the clock will switch back to standby mode.

Specification

Transmitter:

Operation voltage: DC3V (2 AAA batteries)

Operating current: approx. 15mA (transmission), less than 3uA (Standby)

Receiver:

Operation voltage: DC3V (2 AAA batteries)

Operating current: approx. 100mA (vibration), 6mA (Standby)

Effective range: 10 feet
